High concern crimes **Crime dimension ranking key:**	Harm	Criminal		

Medium concern crimes

Misuse of military robots

The availability of any military hardware to criminal or terrorist organisations can be expected to pose a serious threat,

Methods

- **A Review** of academic, news, current affairs, fction and popular culture sources was conducted to identify and catalogue possible AI applicationsand related technologies for perpetration of crime.
- **A sandpit event** was held with 31 representatives from academia, the police, the defence sector, Government and the private sector to rank the threats identifed during the review along four dimensions (harm, criminal proft, achievability, di f culty of defeat).
- **A ratings analysis exercise** took place after the sandpit to aggregate similar crimes and rank them. This resulted in 20 crimes with a rating value in these four dimensions.

Funders

This research was funded by the Dawes Centre for Future Crime at UCL. The Centre was established to identify how technological, social or environmental change might create new opportunities for crime and to conduct research to address them.

The Dawes Centre is funded by the Dawes Trust and UCL. These funds are limited and so we invite additional funding from the public and private sector. By funding the centre you will contribute to helping society better prepare for crimes nawes Cee cms2Or rhe BTfiteTE 5e 9Fftr)1research
